**Amendment to the specification:**

**Amendments to the specification:**

In abstract is amended as follows (in one paragraph and in a separate sheet):

Peptide is disclosed which is capable of binding to  $\beta$ -strand in a separate peptide-containing molecule to form  $\beta$ -sheet, wherein said peptide is selectively  $N\alpha$ -substituted in one edge (first) of the  $\beta$ -strand-forming section of said peptide while the other edge (second) in the opposite orientation to the first edge in view of peptide backbone plane remains  $N\alpha$ -unsubstituted. Such the  $N\alpha$ -substituted peptide is capable of preventing association of said peptide with other  $\beta$ -strand (target) but permits interaction of said peptide with target  $\beta$ -strand in separate peptide-containing molecules through the  $N\alpha$ -unsubstituted edge.

**Objection to the drawings:**

The drawing filed 9/12/05 is objected to because (i) the SC (side chain) moieties presented in the “peptide ribbon plane” of said drawing is inappropriate in which  $\alpha$ -carbons to which the SC moieties link appear to be missing; and (ii) explanation or legend of the drawing should not be presented in the drawing, e.g., “*SCs extend from either side of the peptide (or ribbon) plane- i.e., into/out of the paper*”; it should belongs to brief description of the drawing thereof. In addition, the drawing thereof does not contain a label indicating Figure number in accordance with Figures 1-6 filed 1/28/02.

The following is an **Examiner's Statement of Reasons for Allowance**:

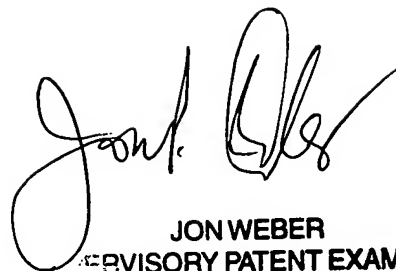

The rejections under 35 USC 102 in the office action mailed 3/1/05 are withdrawn in light of that the applicants' amendment to claims obviates the rejections. The Prior art does not teach a peptide comprising a  $\beta$ -stand forming section which has the two edges define/described in the claims and the drawing filed 9/12/05 wherein one edge comprises at least one  $N\alpha$ -substituent which hinders the interaction of said edge with another  $\beta$ -stand(s) in a separate peptide-containing molecule.

Therefore, 1-28, 43 and 46-47 are allowed.
